DETAILED ACTION

1. Claims 4-14,16-30 were examined.

Section I: Final Rejection

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 4-14,16-30 are directed to a mathematical prediction. This claimed subject matter lacks a practical application of a judicial exception (law of nature, abstract idea, naturally occurring article/phenomenon) since it fails to produce a useful, concrete and tangible result.

Specifically, the claimed subject matter does not produce a tangible result because the claimed subject matter fails to produce a result that is limited to having real world value rather than a result that may be interpreted to be abstract in nature as, for example, a thought, a computation, or manipulated data. More specifically, the claimed subject matter provides for the prediction of a dynamic system. This produced result remains in the abstract and, thus, fails to achieve the required status of having real world value.

Furthermore, the claimed subject matter does not produce a useful result because the claimed subject matter fails to sufficiently reflect at least one practical utility set forth in the descriptive portion of the specification. More specifically, while the described practical utility is directed to predicting a dynamic system the claimed subject

matter relates ONLY to predict the dynamic system directly and taking that result to apply a detected current system mode.

Section II: Response to Arguments

Specification

4. Applicants are thanked for addressing this issue. The objection is withdrawn.

101

5. Applicants are thanked for addressing this issue. The amendments applicants have submitted fail to overcome the 101 rejection because of their broad coverage of the physical sciences (i.e., physical, chemical, or biological). Aside from independent claim 17's preemption problem, the language of "predicting a state of said dynamic..." remains an abstract idea, without any judicial exception, thus is not a "real world" application. To say the process is to predict one state from another state (applicants' response, page 14, 3rd paragraph) is not a useful result since the current state is part of the prediction or abstract thought. The rejection, as set forth above stands.
